1 Pick a Spot for Your Radio

- Tape the Satellite (it’s a round rubber puck) to the windshield or rear window. The adhesive may not hold to tinted glass.
- Position the Satellite where you want to mount your radio. A good location is behind a header or a grab handle within view with the microphone and speaker in the proper orientation.
- Set the Satellite back in the holder to make sure it has attached to the window and won’t fall out.

2 Vent Mount Method

- The best place to hide your antenna cable depends on your type of vehicle.
- In general, install so that the cables are not visible when the hood, trunk, or hatch is open. When the antenna is mounted at the front of the vehicle, bring the cable under the carpet toward the dashboard.
- When the antenna is mounted at the rear of the vehicle, it’s usually easiest to route the cable behind the edges of the trim. Bring the cable out from the trim and route it to run the cable from the rear to the front toward the radio by routing the cable through the wire guide at the rear of the vent louver. The best place to hide the antenna cable depends on your type of vehicle.

3 Connect the Audio to Your Vehicle’s Stereo

- For digital satellite stereo systems, you can use a Cassette Adapter, a FM Direct Adapter, or a Power Adapter.
- Use the Cassette Adapter if your vehicle’s stereo system has an auxiliary input connection. Plug one end of the audio cable into the Cassette Adapter, plug the other end into the audio jack on the satellite.
- Use the FM Direct Adapter if your vehicle’s stereo system has an FM Direct input connection. Plug one end of the audio cable into the FM Direct Adapter, plug the other end into the audio jack on the satellite.
- Use the Power Adapter if your vehicle’s stereo system has a plug-in to power the satellite. Plug one end of the audio cable into the Power Adapter, plug the other end into the audio jack on the satellite.

4 Finish the Installation and Power On

- Tune to the available FM channel you found in step 7. Press the solar button to turn on the satellite. It should take a couple of minutes for the satellite to lock onto the station. If it does not, cycle power a few times and try again. If the satellite still doesn’t lock onto the station, you may want to try to find another FM station.

5 PowerConnect

- PowerConnect is the cable that connects the satellite to the vehicle’s electrical system. If the PowerConnect cable is not already attached, use the cable to connect the satellite to a 12-volt power outlet (i.e., cigarette lighter or power adapter socket). Then plug it into the vehicle. Make sure you use a power adapter provided by XM. Only use the adapter with the built-in battery charger.

Tune your Vehicle’s FM Radio to the Same FM Channel:

- When you have finished step 4 (below), you’ll first need to find an available FM channel in your area, and then you will need to ensure that the FM Antenna is pointed at the same channel.
- **TIP!** Find available channels by using the Satellite’s menu to scan through FM frequencies. This will ensure that the antenna is pointed at the same channel.

Connect Vehicle Dock using the 4 provided screws.

- Connect the Dock using the 4 provided screws.

Orient the adhesive foot so that Onyx is easily accessible.

- Loosen the knob and adjust the adhesive foot to position the Mount for maximum Onyx access. When you finish adjusting the adhesive foot, push the foot until hooked on the rear of the vent louver. Rest the foot against the bottom of the vent.

Dock using the 4 provided screws.

-Dock using the 4 provided screws.

IMPORTANT!

- Mounting surface in the vehicle with the alcohol preparation and finish the remainder of the vehicle installation so that the cables are attached to the dock.
- Wait until after you have connected all the cables to the dock before you attach the dock to the dash or to a vent.

Connect plays the audio through your vehicle’s FM radio. If your vehicle’s stereo system has an auxiliary input connection, plug the other end of the audio cable into the auxiliary input connection of your vehicle’s stereo system. Cassette Adapters are sold separately and can be purchased from an electronics retailer, a plumbing supply company, or a home improvements store.

Audio Quality GOOD BETTER BEST

Manually tune through your local FM channels on your vehicle’s FM radio. Locate and create a list of available FM channels. When you have finished step 4 (below), you’ll first need to find an available FM channel in your area, and then you will need to ensure that the FM Antenna is pointed at the same channel.

**TIP!** Find available channels by using the Satellite’s menu to scan through FM frequencies. This will ensure that the antenna is pointed at the same channel.

**TIP!** Tune for static. If you hear static, you may not be pointed at the same channel.

**TIP!** Do not understand what to do. You might accidentally do damage to your ride.

**CAUTION!** We recommend mounting the antenna at the rear of the roof.

For more help, refer to the User Guide beginning on page 1.
Onyx works on the XM network and requires an XM subscription. Before you can start listening, please do:

1. Go back to Step 1 “Pick a Spot for Your Radio” and finish installing the Dash or Vent Mount. Then continue.

2. Select your favorite FM channel or a different audio connection method.

3. If the chosen FM channel doesn’t work well for you, work down the list of FM channels until you find one that allows you to hear XM clearly. Each time, you will need to tune your vehicle’s FM radio and complete the instructions.

4. If you are using the Vehicle Dock from the Universal Xpress Car Kit instead of the Onyx, you will have to complete some additional instructions before you can set.

5. When your service is activated, your radio will receive all channels to which you have subscribed. At this time, if you press or press menu to cancel activation at this time.

6. To check the signal, press . A series of screens will guide you through the activation process. Follow the instructions on each screen. Press the .

NOTE!
